PEARLS BEAUTY INSTITUTE

BODY BUTTER

FORMULATION INTENSIVE

Learning Area 1 — Body Butter Formulation Foundations

Description:
Develop a strong understanding of modern body butter systems and the formulation principles behind intensive moisturising products.

Core Learning Areas:

- Introduction to body butter formulation
- Understanding body butter systems
- Emulsified body butter systems
- Anhydrous body butter systems
- Ingredient functions within body butter formulations
- Moisturisation and skin-conditioning principles
- Product structure and formulation considerations

Learning Area 2 — Formulation Design & Texture Development

Description:
Learn how to design body butter formulations from scratch and control their structure, texture and sensory characteristics to achieve specific product objectives.

Core Learning Areas:

- Ingredient selection and functionality
- Formulation structure and balance
- Emulsified vs. anhydrous formulation design
- Butter, oil and emollient selection
- Texture development and modification
- Spreadability and skin feel
- Formulation calculations and batch scaling
- Customising formulations for different product concepts

Learning Area 3 — Product Development & Formulation Troubleshooting

Description:
Apply formulation principles to develop different body butter products while understanding the factors that influence texture, stability and overall product performance.

Core Learning Areas:

- Developing targeted body butter concepts
- Creating different sensory and performance profiles
- Texture optimisation

- Common formulation and processing challenges
- Troubleshooting formulation defects

Product Formulation Projects:

- Intensive Moisture Body Butter
- Whipped Body Soufflé
- Radiance Renewal Body Butter
- Barrier Recovery Body Butter
- Skin Conditioning Body Butter

Learning Area 4 — Texture, Performance & Product Refinement

Description:
Develop the ability to assess body butter formulations based on their physical characteristics and product performance, and refine formulations to achieve the desired product experience.

Core Learning Areas:

- Texture development and optimisation
- Assessing body butter consistency
- Product performance characteristics
- Evaluating the behaviour of different body butter systems
- Refining formulations to achieve the intended texture
